1300 – 1400 Hrs. Lunch

1415 – 1515 Hrs. Panel Discussion # 1: The Outlook: Aviation Financing and Leasing

India leases 85% of its fleet from the offshore companies. It is strongly felt that India must leverage its growing air traffic to establish a robust aircraft leasing industry, which would finance new aircraft deliveries through its own policies and products. It is vital to develop this new line of business in India for financial services and add India on the map of global financial centers for international financial services. Leasing aircraft also provides airlines the option to quickly increase and decrease capacity. As airlines keep inducting new aircraft, owing to the shorter fleet replacement cycles, they benefit from lower maintenance costs, better fuel efficiencies and access to other new technologies. The government has established a unified authority known as 'International Financial Services Centers Authority (IFSCA)' to regulate all financial services in International Financial Services Centers (IFSCs) in the country. IFSCA has released a framework and the regulations and various steps have been taken to remove the bottlenecks and initiate aircraft leasing business. The Session focuses on the reforms and changes that IFSC, like GIFT city in Gujarat, will enable to make India a compelling alternative to existing leasing destinations thus fulfilling the vision of Atmanirbhar Bharat in aviation.

1500 – 1600 Hrs.	India – UK Roundtable with British High Commission and UK NATS
1530 – 1630 Hrs.	Panel Discussion # 2 Air Cargo, Resilient in Paradigm Shift: A Perfect Illustration

The COVID-19 pandemic has precipitated a divergence between air cargo and passenger services. It has not only challenged the Air Cargo sector, that accounts for approximately 35% of global trade by value, but has shown how the community has remained resilient, value-generating and quickly adapting to a fast-evolving situation. Air cargo volumes have been more resilient to coronavirus pandemic-related effects than passenger traffic activity owing to increased ecommerce and online purchases. Air cargo is frequently used to transport high-value, time-sensitive commodities and, more recently, personal protective equipment (PPE), ventilators and other medical equipment. Air cargo demand was driven by both urgencies to obtain these supplies and the need to fill in for supply chains that had been disrupted due to stay-at-home orders and travel restrictions. Despite the short-term growth and exemplary resilience, Air cargo faces prolonged prevalent challenges which may impact in long term. Issues transpiring from a sharp global drop in passenger demand effecting the air cargo throughput largely due to decrease in passenger aircraft belly cargo capacity, over reliance on belly space, increased shipping rates, shortage of freighter aircrafts, lack of multimodal logistics ecosystem and compounding trend towards economic protectionism that was evident before the current pandemic. The session illustrates the Air cargo resilience despite challenges by exemplary anecdotes, deliberates the changing nature of EXIM flows, industrial and agriculture cargo in the pandemic times, safety and addressing the immediate needs and eliminating long term deterrents.

1645 – 1745 Hrs.	Panel Discussion # 3 Making India a Global Drone Hub by 2030: Issues & Way Forward

Drones have become an important tool in fighting the COVID-19 pandemic, helping to create more resilient supply chains and socially distanced delivery services. The crisis is driving innovation in drone policy as society has started to recognize that the utility of drones outweighs potential risks. Fully integrating drones into supply chains will require collaboration and drive. The way the world views drones is changing. Once a nuisance buzzing around our heads, drones are now life-saving tools in the battle against COVID-19. Instead of nuisance or novelty, drones are becoming necessary. Drones are shifting from a hyped-up super technology that can solve every challenge to a tool that can allow us to meet specific needs. This shift allows us to focus on specific implementations that drive the greatest return. Capital investments in some sectors are panning out, while markets are maturing around these uses. New aerial technologies are set to play a major role in an economy looking for innovative ways to meet the demands of the coronavirus crisis – and looking toward a global reset. This session will examine the future of drones with emphasis on technology, infrastructure, standards/regulations, safety, privacy, collaborations, R&D and public acceptance.

1500 – 1600 Hrs.	Panel Discussion # 4: Revival of Aviation - Ascending through the Clouds of Optimism: Airlines Perspective

Aviation will always remain an indispensable part of how we travel domestically or internationally, whether for business or leisure. Once we have braced the impact, airlines will have to fend themselves during the revival phase. Revival phase would be akin to revamping business models with innovations and unprecedented strategies. The Airlines will have to find the perfect amalgamation of traditional approach of pushing all economic buttons and design approach of creating new tools & avenues that inherently augurs well for the entire ecosystem, with a definite focus on sustainability.

Commercial air travel is being eventually revitalised with Indian government opening up the skies once again, the aviation sector is now moving towards the path to recovery, thus advancing the country's economic fortune. The session discusses how with the right mix of policy support, creation of air bubbles, emphasis on community health, adequate safety measures & SoP's, mitigating the fear perception, best practises and astute business acumen, the aviation sector is all set to walk the path of resurgence and touch new heights.

<p><i>With India's high demand for aircraft, strategic geographic location, rich pool of engineering expertise and competitive labor cost, India has become an important part of the global footprint of leading OEMs. The Government of India aims to formulate a plan for the development of indigenous civilian aircraft, helicopters, and associated aviation equipment to promote India as global hub for the manufacture, design, and innovation in aeronautical manufacturing under the 'Make in India' initiative.</i></p> <p><i>India has a huge potential to be the global Maintenance, Repair and Overhaul (MRO) hub given a long-time perspective. The Hon'ble Minister of Finance also encourages to make the country a hub for Maintenance, Repair and Overhaul (MRO) of aircraft. For not just civil aircraft but defense aircraft can also benefit from the MRO if we make India a huge hub.</i></p>	

The session discusses strategic plans for any unprecedented crisis in the future, creating opportunities for India to be self-sufficient in providing the training required by MRO. The session focuses on the right steps in creating India a Manufacturing and MRO hub to reduce the overall cost of the operators and thus having a ripple effect on the passengers and fulfilling the vision of UDAN.
